Industrial and Commercial Surge Protection

- SPD Series for Integration into Electrical Distribution Equipment
- SPD Series for Mounting External to Electrical Distribution Equipment

SPD Series Sidemount Units

Specification grade surge protective devices for installation external to electrical distribution equipment.

SPD Series Integrated Units

Specification grade surge protective devices installed within Eaton's electrical assemblies.

SPD Series Integrated Unit

SPD Series Sidemount Unit

Critical Load Protection

- **AEGIS-HW:** Series filters for up to 20 amperes, single-phase (protection for PLCs, control equipment)
- **AEGIS-VL:** Hardwired surge filter that protects critical loads up to 5 amperes
- **OEM components:** A wide variety of components for domestic/international applications (including military)

AEGIS Products

Datacom Protection

Eaton's line of data and communication surge suppression products are available for nearly any configuration and offer complete protection for computers and small to large networks, including the following:

- Modular protection for multi-pair applications
- Hardwire connected (one or two pair protectors)
- Wiring connectors (D89, DB25 and RJ11)
- Coaxial cable protection
- Mounting hardware

Datacom Products

Telecommunications Protection

Eaton's Telecommunication surge suppression products are designed to safeguard against harmful and potentially disastrous surges and spikes. Our data communication and telecommunication surge suppression solutions protect your equipment from the damage frequently caused by lightning strikes, brownouts, electrical load switching, faulty wiring, downed power lines and more. This unique line was developed to protect against the harmful surges that threaten your telecommunication circuits.

Panelboards with Integrated Surge Protective Devices

- Available in standard and custom configurations
- Ratings:
 - 120/240 Vac, single-phase, three-wire
 - 208Y/120 Vac, three-phase, four-wire
 - 480Y/277 Vac, three-phase, four-wire
 - 600Y/347 Vac, three-phase, four-wire (other voltage configurations are available)
- Copper bus
- 12, 18, 24, 30, 36 and 42 circuits
- Bolt-on branch breakers
- A full range of factory installed modifications and accessories
- Fully rated or series rated

Surge Protective Devices can be Integrated within a variety of Eaton Electrical Assemblies

10

Power Conditioning

Sag Ride Through (SRT)

The sag ride through (SRT) is a power conditioner that corrects voltage sags to maintain uptime and productivity.

Sag Ride Through (SRT)

Electronic Voltage Regulator (EVR)

The electronic voltage regulator (EVR) is designed to meet the needs of customers who experience voltage regulation problems due to brownout conditions from their electric utilities.

Electronic Voltage Regulator (EVR)

Application Description

Application Recommendations for Surge Products

Application Type	Eaton's Surge Product	Features and Competitive Advantages
Light Commercial		
Design build	SPD Series integrated units	Ideal package for any commercial facility
Chain stores	SPD Series sidemount units	Cost-effective, reliable protection using the SPD Series or CVL units
Small facilities	CVL units CVX units	
Large Projects		
Including:	SPD Series integrated units in panelboards, switchboards, MCCs, switchgear, busway and automatic transfer switches	Able to meet competitors' SPD specifications
Commercial	SPD Series sidemount units	Increased surge protection performance by using integrated SPD Series units
Government	CVL units	Wall space savings by using integrated SPD Series units
Schools	Datacom surge protectors	Quick-ship capabilities from Eaton assembly satellites and service centers
Institution	AEGIS units for critical load applications	Power conditioning capability for a wide variety of applications
Military	Power conditioners (EVR and SRT units)	
Industrial		
Including:	SPD Series integrated units in panelboards, switchboards, MCCs, switchgear, busway and automatic transfer switches	Increased surge protection performance by using integrated SPD Series units
Small and large facilities	SPD Series sidemount units	Wall space savings by using integrated SPD Series units
WWTP	CVL units	MCCs with SPD Series units installed protect drives from damage
	AEGIS units for critical load applications such as PLCs, robotics applications, etc.	AEGIS products protect expensive critical loads from harmful damage
	Power conditioners (EVR and SRT units)	EVR units correct voltage regulation problems SRT units correct voltage sag problems
OEM		
Any OEM customer including:	SPD Series integrated units	Years of experience in a variety of OEM applications
Integrators	SPD Series sidemount units	Application assistance and recommendations
Medical equipment	CVL units	Small footprint enables integration in a variety of applications
Automation and control	CVX units Datacom surge protectors AEGIS units for critical load applications	Ability to meet customized requirements
Telecommunications		
Including:	Panelboards and automatic transfer switches with integrated SPD Series units	Ability to meet customized requirements
Cellular sites	SPD Series sidemount units	Application assistance and recommendations
Microwave	CVL units	
PCS	CVX units	
Paging systems		

Facility-Wide Power Protection Solutions

A facility-wide protection approach should be employed to address power quality issues. This approach minimizes overall lifecycle costs and optimizes facility uptime. The following is a

recommended design approach for implementing facility-wide Eaton power protection solutions.

The most accepted design methodology is based on two concepts:

1. Ensure proper grounding conditions exist. All forms of power protection/conditioning rely on good grounding, bonding and earthing practices.
2. Surge protection should be installed at key distribution panels and critical loads.

Application of Surge Protection, Voltage Regulation and Sag Correction Devices

Power Protection & Conditioning Applications

Surge Protection

SPD Series
SPD Series integrated and sidemount surge protective devices.

CVL
CVL sidemount surge protective device.

AEGIS
AEGIS powerline filters provide protection for PLCs and other critical loads.

DATACOM
Datacom family of surge suppressors: For all telephone and data communication lines.

Case Study: Commercial/Industrial Facility

Note: all incoming data, telephone, 4-20 mA, and signal lines require protection.

SA.37.11D.S.E.

10

The above illustration identifies possible locations for:

- Voltage sag correction or regulation solutions (power conditioners)
- ac surge protection
- Telephone, cable and data line surge protection

Eaton offers the most comprehensive and effective facility-wide, power quality solutions.

*Note: these products can be applied either at the service entrance or branch location

Product Overview

Product Description

Eaton's SPD series surge protective devices are the latest and most advanced UL® 1449 3rd Edition certified surge protectors. Units are available integrated within Eaton electrical assemblies, including panelboards, switchboards, motor control centers, switchgear, automatic transfer switches and bus plugs.

SPD Series Integrated Units

A complete offering of sidemount units designed for mounting external to electrical distribution equipment is also available. Application of SPD Series units throughout a facility will ensure that equipment is protected with the safest and most reliable surge protective devices available. SPD Series units are available in all common voltages and configurations and also in a variety of surge current capacity ratings from 50 through 400 kA. Three feature package options are also available to choose from, ensuring the proper unit is available for a variety of applications.

Features, Benefits and Functions

- Utilizes thermally protected metal oxide varistor (MOV) technology
- Three feature package options
- True protection status indicators report the status of the protection elements, not the status of the applied power
- Available integrated within the following Eaton electrical assemblies: panelboards, switchboards, motor control centers, switchgear, automatic transfer switches and bus plugs
- 10-year warranty

Safety Features

- All units utilize thermally protected metal oxide varistor technology (MOV) as their core surge suppression component. Usage of this technology ensures safe operation when the unit is subjected to abnormal conditions such as temporary overvoltage or high fault current conditions. Under such conditions, the thermally protected MOVs are removed from the circuit quickly and safely before a potentially unsafe condition can occur
- SPD Series units contain no replaceable parts such as surge modules, fuses, or surge counter memory backup batteries. This prevents potential arc flash and shock hazards, as the units require no periodic service or user intervention after installation
- Integrated versions of the unit are factory installed and sidemount versions are factory sealed. These important safety measures further enhance user safety

Three Feature Package Options Available

The SPD Series provides users with the option of selecting between three feature packages. These feature packages are the basic, standard and standard with surge counter. The proper feature package can be selected based on the requirements of the application or specification. A side by side comparison of the individual features found in each package is below.

Basic Feature Package

The basic feature package is perfect for applications where basic, cost-effective, safe and reliable surge protection is required, but budgets don't allow for extra, additional features. Rather than sacrifice performance or safety due to cost, SPD Series units with the basic feature package provide you with high-performing surge protection without sacrificing safety or reliability. The basic feature package provides the same level of surge protection and safety provided by the standard and standard with surge counter feature packages minus some of the features found in them. The package contains dual-colored protection status LEDs that report the true status of the protection in each phase/mode. All four-wire plus ground units also contain an additional set of dual-colored protection status LEDs that report the status of the protection in the neutral/ground mode.

Standard Feature Package

The standard feature package includes all of the features found in the basic feature package, plus an audible alarm with silence button, EMI/RFI filtering, and a form 'C' relay contact that can be used for remote annunciation of the SPD's status. The audible alarm activates and the form 'C' relay contact changes state when any loss of protection is detected or a fault condition exists with the unit. Should such a condition occur, the audible alarm can be silenced by pressing the silence button. The EMI/RFI filter provides up to 50 dB of noise attenuation over the range of 10 kHz through 100 MHz.

Standard with Surge Counter Feature Package

The standard with surge counter feature package includes all of the features found in the standard feature package plus a six-digit surge counter with a reset button. The surge counter indicates the ongoing count of the number of surges the unit has been exposed to and stores them in nonvolatile memory. Should power to the SPD Series unit be completely interrupted, the surge counter will recall and display the surge count prior to the interruption when power is restored. Unlike many surge protectors, the SPD Series' surge counter memory feature does not require a backup battery that would require periodic replacement in order to achieve its memory functionality.

Side-By-Side Comparison of the SPD Series' Available Feature Packages

Feature Package Comparison	Basic	Standard	Standard with Surge Counter
Surge protection using thermally protected MOV technology	■	■	■
Dual-colored protection status indicators for each phase	■	■	■
Dual-colored protection status indicators for the N-G protection mode	■	■	■
Audible alarm with silence button		■	■
Form 'C' relay contact		■	■
EMI/RFI filtering, providing up to 50 dB of noise attenuation from 10 kHz to 100 MHz		■	■
Surge counter with reset button			■

Standards and Certifications

- Integrated versions of the unit are UL 1449 3rd Edition recognized components for the United States and Canada, covered by Underwriters Laboratories certification and follow-up service
- Sidemount versions are UL 1449 3rd Edition listed devices and are also CSA approved

Technical Data and Specifications

- 20 kA nominal discharge current (I_n) rating (maximum rating assigned by UL)
- 50 through 400 kA surge current capacity ratings
- 200 kA short-circuit current rating (SCCR)

SPD Series for Integration into Electrical Distribution Equipment

Product Description

Eaton's SPD Series surge protective devices are the latest and most advanced UL 1449 3rd Edition certified surge protectors. SPD Series units are available in all common voltages and configurations, and also in a variety of surge current capacity ratings from 50–400 kA.

Application Description

The SPD Series is available as an integrated device within the following Eaton electrical assemblies:

- Panelboards
- Switchboards
- Motor control centers
- Switchgear
- Automatic transfer switches
- Bus plugs

Features, Benefits and Functions

- Uses thermally protected metal oxide varistor (MOV) technology
- Three feature package options
- 10-year warranty

The Integrated SPD Performance Advantage

Installation conductor length is the single most important factor related to an SPD's performance. Performance decreases as the connected conductor length increases. Integrating the SPD within the electrical assembly provides the best possible surge protection by keeping installation conductor lead lengths as short as possible. Integrating the SPD within an electrical assembly can decrease let-through voltages by hundreds of volts, providing you with the best possible surge protection for sensitive electronic loads.

Remote Display Mounting Option Available

The SPD Series offers the option of mounting its display remotely from the device. This is useful for applications where OEMs or other integrators would like to embed the unit within a piece of equipment and still be able to view its display.

In this installation, the SPD Series is mounted directly to the panelboard's bus bars. This type of installation will provide the best possible surge protection by minimizing the connected lead length.

The SPD Series is also available as an integrated unit interfaced via a circuit breaker resident in the electrical assembly. This installation keeps connected lead lengths short while providing a means of disconnecting power to the unit quickly and easily.

Standards and Certifications

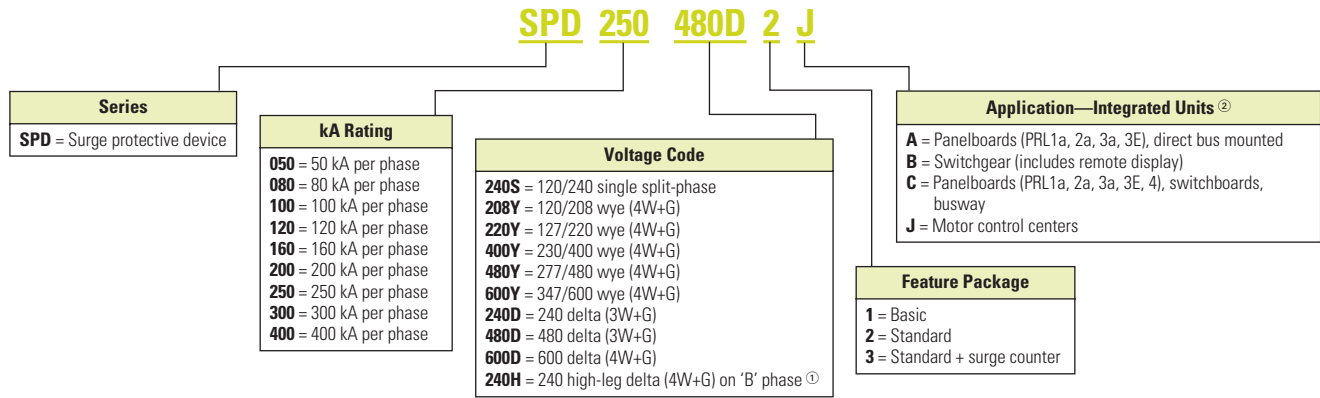

- UL 1449 3rd Edition recognized component for the United States and Canada, covered by Underwriters Laboratories certification and follow-up service
- UL 1283 (Type 2 SPDs only)

Catalog Number Selection

SPD Series Units Mounted Internal to Electrical Distribution Equipment

10

Notes

- ① Please consult the factory for 240 high-leg Delta (4W+G) applications with high leg on 'C' phase.
- ② Units used in PRL1a, 2a, 3a and 3E panelboard applications are available in 50–200 kA ratings only. Use the 'C' option for PRL1a, 2a, 3a and 3E panelboard applications when unit is connected through a circuit breaker.

Example: SPD250480D2J = SPD Series, 250 kA per phase, 480D voltage, standard feature package, motor control center application.

Technical Data and Specifications

SPD Series Specifications

Description	Specification
Surge capacity ratings available	50, 80, 100, 120, 160, 200, 250, 300, 400 kA per phase
Nominal discharge current (I_n)	20 kA (maximum rating assigned by UL)
Short-circuit current rating (SCCR)	200 kA
SPD type	Basic feature package = Type 1 (can also be used in Type 2 applications) Standard and standard with surge counter feature packages = Type 2
Single split-phase voltages available	120/240
Three-phase wye system voltages available	120/208, 127/220, 230/400, 277/480, 347/600
Three-phase delta system voltages available	240, 480, 600
Input power frequency	50/60 Hz
Power consumption (basic units):	
208Y, 220Y, 240S, 240D and 240H voltage codes	0.5W
400Y, 480Y and 480D voltage codes	1.1W
600Y and 600D voltage codes	1.3W
Power consumption (standard and standard with surge counter units):	
208Y, 220Y, 240S, 240D and 240H voltage codes	0.6W
400Y, 480Y and 480D basic voltage codes	1.7W
600Y and 600D voltage codes	2.1W
Protection modes	Single split-phase L-N, L-G, N-G, L-L Three-phase wye L-N, L-G, N-G, L-L Three-phase delta L-G, L-L Three-phase high-leg delta L-N, L-G, N-G, L-L
Maximum continuous operating voltage (MCOV):	
240S, 208Y, 220Y and 240H MCOV	150 L-N, 150 L-G, 150 N-G, 300 L-L
400Y and 480Y MCOV	320 L-N, 320 L-G, 320 N-G, 640 L-L
600Y MCOV	420 L-N, 420 L-G, 420 N-G, 840 L-L
240D MCOV	320 L-G, 320 L-L
480D MCOV	640 L-G, 640 L-L
600D MCOV	840 L-G, 840 L-L
Ports	1
Operating temperature	-40°F through 122°F (-40°C through 50°C)
Operating humidity	5% through 95%, noncondensing
Operating altitude	Up to 16,000 ft (5000m)
Seismic withstand capability	Meets or exceeds the requirements specified in IBC 2006, CBC 2007 and UBC Zone 4
Form C relay contact ratings	150 Vdc or 125 Vac, 1A maximum
Form C relay contact logic	Power ON, normal state—NO contact = open, NC contact = closed Power OFF or fault state—NO contact = closed, NC contact = open
EMI/RFI filtering attenuation	Up to 50 dB from 10 kHz to 100 MHz

SPD Series for Mounting External to Electrical Distribution Equipment

Product Description

Eaton's sidemount versions of the SPD Series surge protective devices are the latest and most advanced UL 1449 3rd Edition listed surge protectors. Application of SPD Series units throughout a facility will ensure that equipment is protected with the safest and most reliable surge protective devices available. Units are available in all common voltages and configurations, and also in a variety of surge current capacity ratings from 50 through 400 kA. Three feature package options are also available to choose from.

Features, Benefits and Functions

- Uses thermally protected metal oxide varistor (MOV) technology
- Three feature package options
- 10-year warranty

Standards and Certifications

- UL 1449 3rd Edition listed device
- Canadian Standards Association (CSA)
- UL 1283 (Type 2 SPDs only)

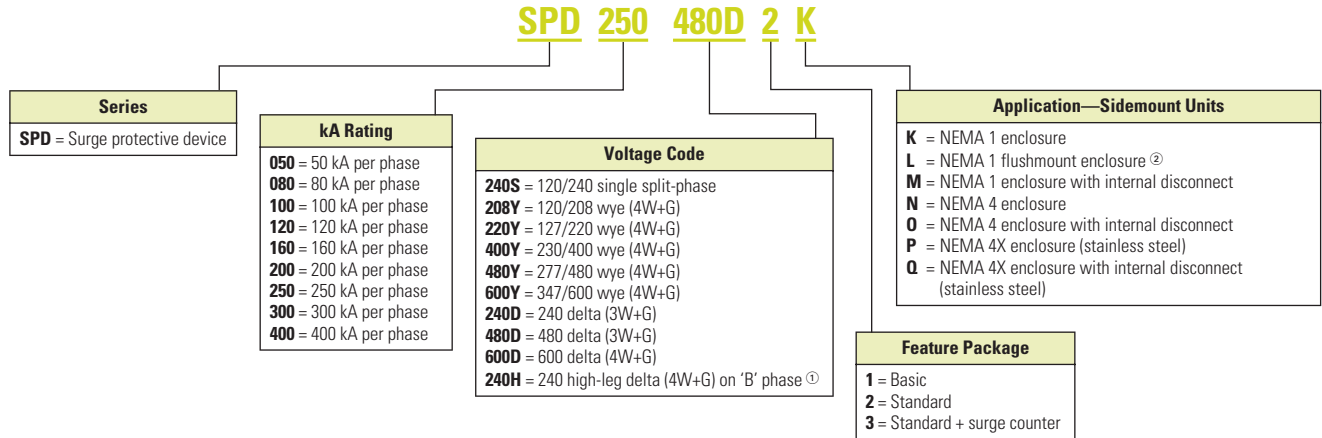

All SPD Series sidemount units come prewired and include a factory-installed conduit interface, making installation very easy.

All SPD Series units are factory sealed, ensuring that the user/installer has no potential of coming into contact with harmful voltages present inside the unit.

Catalog Number Selection

SPD Series Units for Mounting External to Electrical Distribution Equipment

Notes

① Please consult the factory for 240 high-leg delta (4W+G) applications with high leg on 'C' phase.

② NEMA 1 flushmount units are available in 50–200 kA ratings only.

Example: SPD250480D2K = SPD Series, 250 kA per phase, 480D voltage, standard feature package, housed in NEMA 1 enclosure.

CVL Surge Protective Device

Product Description

This surge protection device is used to prevent downtime and equipment damage.

Eaton’s CVL is a commercial grade and light industrial surge protective device (SPD) that combines surge suppression components and EMI/RFI filtering to provide effective protection for sensitive electronic loads.

Features, Benefits and Functions

- SurgePlane™ technology to ensure reliability and performance by using a low impedance copper platform
- Compact design to enable close mounting to electrical distribution equipment
- Parallel hybrid filter technology
- Individually fused surge suppression components
- Status indicator lights to monitor supply power, surge suppression component status and fusing
- Can be remotely monitored using Form C contacts
- Audible alarm
- Ideal for OEM panel applications
- Proven track record in international applications

Standards and Certifications

- UL 1449 listed, UL 1283 listed, CSA approved
- The UL 1283 listed filter protects against ringing transients and EMI/RFI noise disturbances. The tuned suppression filter achieves 40 dB attenuation at 100 kHz

AEGIS Powerline Filters

Product Description

Eaton’s AEGIS solutions are specifically designed to protect expensive electronics from the hazards that exist within a facility. This critical load protection is effective at reducing harmful surges and noise. Applying this high performance series powerline filter at your critical loads results in “clean” power entering the electronics and reduction of “soft” errors, operational malfunction and damage to components.

Application Description

The AEGIS is the ideal protection solution for your critical loads and facilities.

Loads

- Programmable controllers (PLCs)
- Scanning devices
- ATMs (Automatic Teller Machines)
- Cash registers
- Alarm systems
- Microprocessor-controlled OEM products
- Robotics
- CAD/CAM systems
- Control equipment
- Medical electronics and devices

Why Should Sensitive Electronic Loads be Protected?

PLC manufacturers and service technicians recommend the use of surge suppressors and filters to prevent downtime and equipment damage due to surges and electrical line noise. One study shows failure to protect sensitive electronic loads costs American manufacturing, commercial and service industries over \$39 billion per year in lost time and revenue. Preventing these losses is a major cost-saving opportunity.

Features, Benefits and Functions

AEGIS powerline filters protect against the full spectrum of transient disturbances.

AEGIS filters the entire sine wave and is effective against both frequently occurring low energy and occasional high energy transients. High energy transients can create immediate damage, while low energy transients cause microprocessor failure over time.

**AEGIS VL Hardwired Critical Load Filter
1, 3 and 5 Ampere Modules Only**

**Hardwired Surge Filter that
Protects Critical Loads (3, 5, 10,
15 or 20 Ampere Models)**

10.2

SPD, Power Conditioning, PF Capacitors and Harmonic Filters

Surge Protective Devices (SPD)

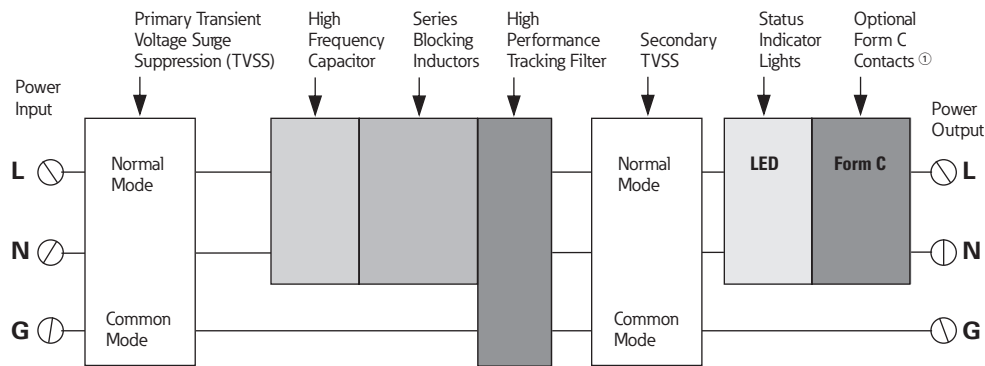

AEGIS Powerline Filters

Features	Benefits
Unique series hybrid design (AEGIS-HW)	Protection against high and low energy transients and noise. The tracking filter reacts instantly to changes in frequency and voltage, regardless of phase angle, magnitude or polarity. Active at all times, providing more protection than a conventional surge suppressor. Extends the life of your microprocessors by eliminating degrading power disturbances.
High performance suppression capabilities (AEGIS-HW)	AEGIS-HW and AEGIS-PR have up to 45,500 amperes of surge current suppression and 75 dB of noise attenuation at 100 kHz. This guarantees a superior level of protection and reliability.
Status monitoring lights (AEGIS-HW)	No more testing or guessing whether your unit is working properly. Filter indicator lights expedite your troubleshooting efforts during downtime situations.
5-year downstream equipment warranty (AEGIS-HW only)	Eaton provides a 5-year extended warranty on the microprocessor power supply protected by AEGIS. No other manufacturer offers this level of assurance in backing up its claim of product performance, quality and reliability.
Value (AEGIS-HW)	AEGIS provides superior value when considering the level of performance and benefits offered. It truly delivers the best “bang” for your dollar.
Optional remote monitoring capabilities (AEGIS-HW, AEGIS VL only)	Observe all your operations on a remote basis, including the power protection devices used to safeguard your critical and sensitive electronic loads.
DIN rail, J-rail or flange mounting connections (AEGIS-HW only)	The DIN rail mountable enclosures greatly reduce installation time, effort and cost. This unique container is the preferred choice among OEMs and contractors.
Thermal cut-off protection (TCO) (AEGIS-HW only)	Thermal fuse improves indication, monitor and control during fault conditions.

CVX050/100

Product Description

With over two decades of experience in the surge suppression industry and extensive R&D initiatives, Eaton is considered a world leader in surge protective device (SPD) manufacturing. All of Eaton's products are manufactured in an ISO® 9001:2000 and ISO 14001 certified facility.

Eaton's CVX050/100 models are rugged, cost-effective, high-quality SPDs that feature thermally protected MOVs that eliminate the failure characteristics of standard Metal-Oxide-Varistors. The TPMOV is a fail-safe device that monitors the status of the metal-oxide disk and connects itself from the power system when the disk is approaching breakdown.

The CVX050/100 is easy to install adjacent or even internal to electrical equipment. When installing an SPD in a retrofit environment, it is important to mount the device as close to the electrical equipment as possible. Keep the wiring (lead length) between the electrical equipment and SPD as short as possible, and twist or wire tie the conductors together to reduce the wire's impedance factor.

Application Description

Eaton's CVX050 and CVX100 SPDs protect electronic equipment from damaging transients. These units are suitable for medium and low exposure level applications that require cost-effective, high quality system protection including:

- Residential/small business
- Light industrial
- Light commercial
- Branch panel protection

Features, Benefits and Functions

- Advanced surge path technology for high fault current capacity, low impedance, high frequency design
- Rugged NEMA® 4X (IP65) enclosure
- Large diameter, thermally protected metal oxide varistors provide long life and fail-safe operation
- LED monitoring of each phase
- Wide range of voltage applications from 100 to 480 Vac
- 10-year free replacement warranty

Optional Features

- Available flushmount for recessed installations

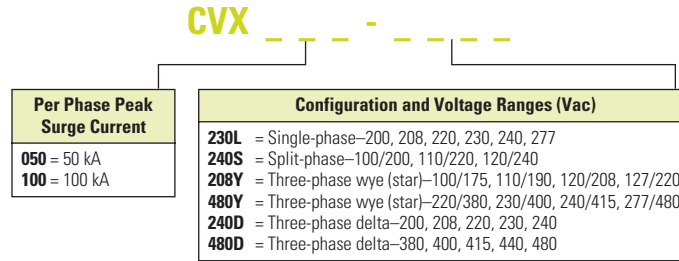

Standards and Certifications

- UL 1449 3rd Edition for surge protective devices
- CE marked
- Vibration tested IEC 60255-21-1 and -2

Datacom

Product Description

Eaton’s Datacom surge protection products are designed for all industries and applications. The wide range of products offers rugged surge protection in convenient, easy-to-install configurations.

Features and Benefits

Exceptional performance is achieved using three-stage hybrid technology:

- Gas tubes for shunting high energy
- Silicon avalanche components for responsive, low let-through voltages
- PTC resettable fuses for mitigating fault current
- Our modular design enables customers to protect complete facilities or individual loads. Customers also save significant time and money due to our unique plug-in components and protection modules

Sag Ride Through (SRT)

Sag Ride Through (SRT)

Product Description

Eaton's sag ride through is the first of its kind.

The SRT power conditioner prevents expensive electrical downtime. The SRT represents Eaton's state-of-the-art solution to today's power conditioning challenges.

The Problem—Voltage Sags and Brownouts

The ability of a plant to ride through voltage sags can have a significant impact on operations and competitiveness. In the United States, voltage sags cost billions of dollars in lost production, interruption, damaged materials, retooling and scrap. In addition, sags can cause: increased operating costs, the need for product reworks, safety hazards, equipment damage and/or failure, reduced product quality, increased clean-up, additional labor costs, increased scrap material and costs associated with investigations into the problem.

Today's industrial and large commercial electricity customers are becoming more sensitive to power disturbances and are demanding better electric quality. However, the quality of power grids is not significantly improving. Customers still experience power quality problems that affect plant operations and profitability.

Deep, Single-Phase Sag

Definition of Voltage Sag

A voltage sag is a sudden, momentary decrease in supply voltage. It can last from a cycle to several seconds. Voltage sags are most often caused by faults on the electrical transmission or distribution system. They can be caused by lightning strikes, animal contact, starting of large motors or an internal fault within a customer's facility.

Sag Ride Through (SRT)	
Application Description	27
Features, Benefits and Functions	27
Catalog Number Selection	28
Technical Data and Specifications	29
Dimensions	31
Electronic Voltage Regulator (EVR)	32

Depending on the proximity to the fault, which can be hundreds of miles away, the voltage during the sag is typically 40%–90% of nominal utility voltage. The operation of circuit breakers, fuses and reclosers limits most sags to less than 15 cycles.

Voltage sags are experienced 10 to 20 times more frequently than complete outages. However, voltage sags are equally disruptive to sensitive equipment.

Voltage Sags

Regularity of Voltage Sags

EPRI conducted a two-year study of power quality levels on distribution systems in the United States. A variation event was recorded every time the voltage dropped below 90% of the nominal. The results are shown below.

A typical distribution system customer experiences about 50 events per year when the voltage drops below 90%, and only about two events per year when the voltage drops below 30% of nominal. The utility study concluded that sags represented almost all of the events experienced at a typical facility.

Events per Year

Application Description

Industries and Applications Affected by Sags

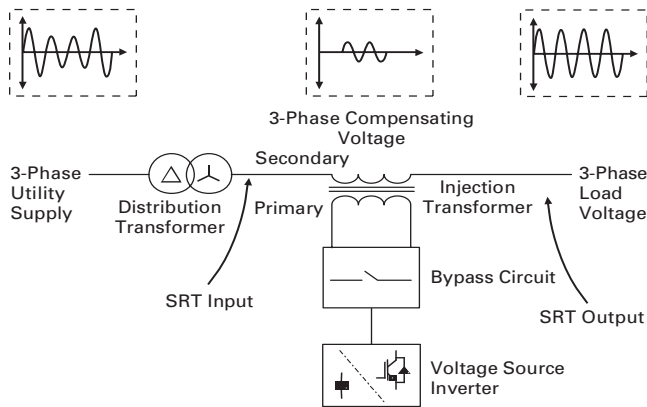

Key industries:

- Semi-conductor manufacturers
- Communications
- Steel mills
- Petroleum and chemical processing
- Health care
- Paper mills
- Automotives
- Textile
- Printing
- Plastics
- Other manufacturing

Equipment or processes:

- Manufacturing process controllers
- Variable speed drives
- Robotics
- Motor conductor
- Telephone systems
- HID lighting
- HVAC controls
- Medical equipment
- Computers

Block Diagram of the SRT Active Voltage Conditioner

Features, Benefits and Functions

Sag Correction Using the SRT

The SRT is a high performance, inverter-based voltage conditioning device developed to provide protection to sensitive loads against commonly occurring voltage sags.

The SRT monitors the incoming supply voltage and when it deviates from the nominal voltage level, the SRT achieves voltage conditioning by injecting the appropriate correction voltage in series with the power supply. The SRT provides an extremely fast reaction time and subcycle response to sag events that would otherwise cause loads to drop out.

The SRT is designed for low voltage systems (600 to 208, three-phase) and is also offered in medium voltage applications from 25 kVA to 4 MVA. Installation is simple and the SRT provides customers with a new solution to improve productivity and reduce downtime for sag related problems.

The SRT meets the stringent requirements of the Semi-F47 standard; a key requirement for SAG correction in the semiconductor industry.

- Complete correction of single-phase voltage sags down to 63% for 30 seconds
- Partial correction of three-phase sags down to 50% for 30 seconds
- Correction of utility voltage unbalance (from network side of transformer)
- Attenuation of voltage flicker

Continuous Regulation

The Sag Ride Through is an active voltage conditioner. This means it will constantly respond to voltage sags and swells in the $\pm 10\%$ range with a regulated output in the $\pm 1\%$ range. The SRT can be applied to the main service entrance, at branch locations or in front critical loads. The SRT provides an outstanding return on investment. It delivers operation productivity that is just not possible with traditional tap switching or ferroresonant technologies.

The SRT consists of a voltage source inverter, bypass circuit and an injection transformer connected in series between the incoming utility supply and the load, as shown in the figure below. For the standard sag correcting model, the injection transformer consists of a boost component. The SRT monitors the incoming supply voltage and when it deviates from the nominal voltage level the SRT inserts an appropriate compensating voltage using the IGBT inverter and series injection transformer. Energy is sourced from the supply during this time. This regulates the load voltage to its nominal value, thus eliminating voltage disturbances from the utility supply affecting the load.

Notes

- ① For 50% Hz international applications, consult factory.
- ② For 15% correction, consult factory.
- ③ Optional mechanical bypass, refer to factory for details.
- ④ For 50 Hz international applications, consult factory.
- ⑤ Terminal cabinet required on all units 200 kVA and larger except when a bypass is required.

Technical Data and Specifications

SRT Specifications

Description	Specifications
Load Capacity	
Capacity (kVA)	25 kVA to 50 MVA (as specified per model)
Displacement power factor of connected load	0–1, leading or lagging
Crest factor for rated kVA	2.0 at 100% of rated load for continuous operation (including up to 10% voltage correction)
Overload—30 seconds	150% with up to 10% of voltage correction
Input Supply	
Nominal supply voltage	208/480/600V, 60 Hz three-phase, three-wire plus ground (higher system voltages supplied to requirement up to 36 kV)
Maximum supply voltage	110% of nominal supply voltage
Minimum three-phase supply voltage	
Running	50% of nominal supply voltage
Starting ^①	75% of nominal supply voltage
Minimum single-phase-to-ground supply voltage ^②	
Running	25% of nominal supply voltage
Starting ^①	63% of nominal supply voltage
Efficiency of system	98–99%
Output Supply	
Nominal voltage (V)	208/480/600V, 60 Hz; three-phase, three-wire plus ground (higher system voltages supplied to requirement)
Three-phase balanced correction	+30% for at least 30 seconds for 100% correction
Single-phase-to-ground correction ^②	+45% for at least 30 seconds; +10% continuous three-phase correction (all models). Consult factory for specialist correction requirements.
Voltage regulation	±1% up to 10% continuous three-phase correction ±2.5% at 30% three-phase correction
Response (to sag event)	Initial sag correction applied within 1 ms, remainder over the next cycle
Response to swell event	±1% up to a 10% continuous three-phase correction with initial swell correction applied within 1 ms, remainder over the next cycle (SRT2 models only)
Bypass	
Nominal power	SRT rating (kVA)
Maximum overload capacity (in bypass):	
For 10 minutes (%)	125
For 1 minute (%)	150
For 600 milliseconds (%)	700
For 100 milliseconds (%)	1000
Transfer time ^③	
Inverter to bypass (ms)	<0.5
Bypass to inverter (ms)	<40–750
Environmental	
Operating temperature	32°F to 104°F (0 to 40°C); 122°F (50°C) maximum with 20% load derating
Cooling	Forced ventilation
Capacity derating with elevation	–1.2% every 100m above 1000m
Humidity	<95%, noncondensing
Warranty	1 year

Notes

- ^① If SRT has tripped (offline) due to below threshold input voltages, it cannot be restarted until the system voltage is at least this % of the nominal.
- ^② Single-phase-to-ground fault occurring on the utility side of a delta-wye distribution transformer.
- ^③ The SRT provides continuous correction and only transitions to and from bypass when manually starting and stopping or under fault or overload conditions. The transition from bypass to inverter takes up to 750 ms. The autoresettable bypass mode of operation includes an additional 5-second delay allowing time for the fault to clear.

Electronic Voltage Regulator (EVR)

Product Description

Eaton's Electronic Voltage Regulator (EVR) is the ideal solution for keeping your facility and equipment up and running during brownouts, undervoltage conditions and other power problems. The EVR can significantly reduce the costs of equipment damage and downtime when these situations occur. The state-of-the-art design provides rapid response time, high efficiency, high inrush current capability, and operating advantages exclusive to Eaton.

The EVR maintains a tightly regulated output voltage by automatically activating the appropriate transformer tap through a silicone controlled rectifier (SCR). Tap changer response time is initiated at one cycle, ensuring rapid and precise regulation. Switching at zero current enables noise reduction during tap transitions.

Brownouts

In the United States, most facilities have sufficient voltage regulation. However, in some U.S. locations and many developing countries, regulation problems occur because of overstressed utility distribution systems.

In some cases, due to the excessive demand on the utility system, voltage may be below 10% of nominal (-10%) during the day. This condition is called a **voltage regulation or brownout**.

Customers may notice dim lights and reduced power. During the evening, voltage may rise above 10% of nominal (+10%) because large facilities and loads are shut down. This shutdown reduces the power demand on the grid and results in a voltage increase.

The IEEE defines voltage regulation as overvoltage or undervoltage. Voltage regulation events last from **a few minutes to many hours** with voltage varying by $\pm 20\%$. Long-term regulation problems differ from short duration sags and dips, which are much deeper voltage drops.

The Solution

Prior to installing an expensive solution, Eaton encourages customers to monitor incoming voltage to determine if voltage regulation is a problem. The local utility may also be able to provide information on voltage expected at the facility.

Using a meter, it can quickly be determined if a voltage regulation problem or brownout condition exists. The appropriate solution would be an EVR. EVRs can be installed at the service entrance, branch panel or at critical loads.

Eaton's EVR is a solid-state tap changing power conditioner designed to protect against brownouts and long duration voltage regulation problems.

Features and Benefits

- Coordinated with standard thermal-magnetic breakers to allow motor starts
- Optional 100 kA per phase surge protection
- Input frequency range operation from 57–63 Hz
- Not affected by load power factor. Can operate effectively in low-load applications due to "unique leakage reactance" technology
- Fail-safe bypass circuit, isolation transformer and overtemperature protection
- Less than 1% THD
- Monitoring panel displays rms metering, output voltage and current, kVA, under- and overvoltage, phase rotation, phase loss, first and second stage temperature alarm, shut-off, EPO tripped and eight optional external ports

Technical Data and Specifications

EVR Specification (10 to 1250 kVA)

Feature	Description
Technology	Electronic tap changer
Input voltages	240–600 Vac; three-phase (three-wire)
Input voltage range	+10/–23%
Output voltage range	± 3% typical
Response time	One cycle, zero current switching
Frequency	60 Hz standard (other frequencies available)
Efficiency	96% at full load, 98.5% at light loads
Minimum load	None
Inrush current capabilities	1000% for one cycle; 200% for 10 seconds; or as limited by upstream overcurrent protection
Noise attenuation	
Common mode	–120 dB at 100 kHz
Normal mode	–40 dB at 100 kHz
Monitoring (option)	Refer to “Features and Benefits” for details
Bypass panel	Optional (10–45 kVA), standard (50–500 kVA)
Front access panel	50–150 kVA standard
Surge protection device (option)	100 kA per phase
Operating temperature	32°F to 122°F (0 to 50°C)
Altitude	Up to 7000 ft (2134m)
Standard warranty	12/18 months
Extended warranty (startup service)	12/18 months factory on-site warranty

Notes

All weights are approximate. Monitor option includes main input circuit breaker. Refer to PAD for pricing and availability.

Product Overview

Product Description

Eaton's power factor correction capacitors and harmonic filters are an essential part of modern electric power systems. Power factor correction capacitors are the simplest and most economical means of increasing the capacity of any power system, minimizing energy losses and correcting load power factor. In addition, power factor penalties can be reduced and power quality can be greatly enhanced.

There are several reasons to correct poor power factor. The first is to reduce or eliminate a power factor penalty charged by the utility. Another reason is that your existing transformer is, or shortly will be, at full capacity and installing power factor correction capacitors can be a very cost-effective solution to installing a brand new service. Depending on the amount of power factor correction (kVAR that needs to be injected into the electrical system to improve the power factor) and the dynamic nature of the load, a fixed or switched capacitor bank may be the best solution.

When capacity becomes a problem, the choice of a solution will be dependent upon the size of the increase needed. Like all power quality solutions, there are many factors that need to be considered when determining which solution will be best to solve your power factor problem.

Harmonic Filtering

As the world becomes more dependent on electric and electronic equipment, the likelihood that the negative impact of harmonic distortion increases dramatically. The efficiency and productivity gains from these increasingly sophisticated pieces of equipment have a negative side effect...increased harmonic distortion in the power lines. The difficult thing about harmonic distortion is determining the cause. Once this has been determined, the solution can be easy. Passive and active harmonic filtering equipment will mitigate specific harmonic issues, and correct poor power factor as well.

Capacitor Cell

UNIPUMP

UNIPUMP

Product Description

Non-fused capacitors for outdoor irrigation and oil field installations.

- Designed expressly for outdoor pumping applications
- Pole or wall mounting
- Small, light-weight enclosure for easy installation
- SO-WA type flexible cable facilitates installation (4-conductor)
- Gland-type weatherproof bushings
- Strong outer case

Application Description

Outdoor irrigation and oil and gas field pumping.

Features, Benefits and Functions

Configuration

- **Outer case:** Heavy, No. 14 gauge steel finished with durable powder coat finish. Integral strap mounting bracket with keyhole at top for pole or wall installation. No knockouts

Capacitor Cells

- **Terminals:** Insulated finger-safe terminals rated for 3 kVAC withstand
- **Dielectric fill:** Dry-type cells utilize soft organic polymer resin—Resinol
- Eliminates potential for corona/partial discharge/electrochemical oxidation
- Excellent heat dissipation
- Flash point: +444°F (+229°C)
- Fire point: +840°F (+449°C)

- **Design:** Self-healing metallized high crystalline polypropylene with ramp metallization film. Total losses less than 0.45 watt per kVAR. (Dielectric losses less than 0.2 watt per kVAR)
- **Ramp metallization:** Provides thicker film at higher current density areas, allowing for reduced internal losses, lower operating temperatures and longer life expectancy. Also prevents chain reaction breakdown by limiting propagation of film vaporization
- **Pressure sensitive interrupter:** Built-in, three-phase pop-up interrupter design. UL recognized. Removes capacitor from line before internal pressure can cause case rupture. Bulged capacitor cell top provides easy visual indication of interrupter operation
- **Ceramic discharge resistors:** Reduce residual voltage to less than 50 volts within one minute of de-energization. Selected for 20-year nominal life. Exceeds NEC requirements
- **Capacitor operating temperature:** -40°F (-40°C) to +115°F (+46°C)
- **Case:** Weatherproof aluminum housing
- **Warranty:** The longest in the industry—five full years of warranty on capacitor cells

UNIPAK

Product Description

UNIPAK Filter— Harmonic Filtering

Harmonic filter systems for low voltage, heavy-duty applications.

- Reduce harmonics and correct power factor
- Tuned for maximum efficiency in reducing harmonic currents associated with nonlinear load environments (such as VFDs)
- Two-enclosure design isolates capacitors from high-temperature operating reactors, and allows for flexible installation
- Twenty-year life design
- Five-year cell warranty/ one-year reactor warranty
- Three-phase cell capacitor construction. Three-phase interrupter system

Harmonic Rated Capacitor Cells

- Standard voltage rated capacitor cells designed for higher dielectric strength and with added ability to withstand stress caused by dv/dt voltage transients caused by harmonics
- Better suited for harmonic applications than higher voltage rated cells

UNIPAK with Harmonic Rated Capacitor Cells

- Standard capacitor systems utilizing harmonic rated capacitor cells
- For use in moderate harmonic environments where engineering supervision allows in place of harmonic filter designs
- Provides future conversion capability into a harmonic filter design due to facility growth or increased nonlinear load levels

Application Description

Designed for power factor correction in plants experiencing harmonics problems due to high amounts of nonlinear loads.

UNIPAK with Optional Air Filter

Features, Benefits and Functions

- Five-year warranty on capacitor cells
- Designed for heavy-duty applications
- Twenty-year life design
- Indoor/outdoor service
- Wall (up to 180 kVAR) and floor-mounted units available
- Fuse protection standard
- Blown-fuse indicating lights standard
- Quick lead-times
- Harmonic filters available
- Slim profile allows reduced footprint, conserving valuable floor space
 - New capacitor configuration leads to cooler operating conditions, extending capacitor life

Configuration

- **Outer case:** Heavy, No. 14 gauge steel finished with durable powder coat finish. Wall mounting flanges and floor mounting feet. Elimination of knockouts permits indoor/outdoor use. Manufactured to NEMA requirements 1, 3R and 12
- Elevated floor mounting feet allow access for easy maintenance

Note: NEMA 12 enclosure standard for enclosure sizes A1 to C1.

- **Cover:** "L" shaped gasketed cover with multiple fasteners provides front opening for ease of installation and service
 - **Ground terminal:** Furnished inside case
 - **Power terminal lugs:** Large size provided for easy connection
 - **Fusing:**
 - **Size Code A1:** Three midget-type fuses with 100,000 ampere interrupting capacity
 - **Size Code A2 and larger:** Three slotted-blade type fuses with 200,000 ampere interrupting capacity; Fuses mounted on stand-off bushings or fuse blocks; solderless connectors for easy hookup of incoming line conductors
 - **Fuse indicating lights:** Red, neon blown-fuse indicating lights are protected by transparent weatherproof guard
 - **Options:**
 - No fuses
 - Air filters for units with enclosure sizes C2, D1 and E1
- Capacitor cells**
- **Terminals:** Insulated finger-safe terminals rated for 3 kVAC withstand
 - **Dielectric fill:** Dry-type cells utilize soft organic polymer resin—Resinol
 - Eliminates potential for corona/partial discharge/electrochemical oxidation
 - Excellent heat dissipation

 - **Ramp metallization:** Provides thicker film at higher current density areas, allowing for reduced internal losses, lower operating temperatures and longer life expectancy. Also prevents chain reaction breakdown by limiting propagation of film vaporization
 - **Pressure sensitive interrupter:** Built-in, three-phase pop-up interrupter design. UL recognized. Removes capacitor from line before internal pressure can cause case rupture. Bulged capacitor cell top provides easy visual indication of interrupter operation
 - **Ceramic discharge resistors:** Reduce residual voltage to less than 50 volts within one minute of de-energization. Selected for 20-year nominal life. Exceeds NEC requirements

- **Capacitor operating temperature:** -40°F (-40°C) to +115°F (+46°C)
- **Case:** Weatherproof aluminum housing
- **Warranty:** The longest in the industry—five full years of warranty on capacitor cells

Reactors

- **Tuning:** Tuned to 4.7 harmonic order
- **Detuning:** Reactor designs can be detuned upon request to 4.2nd to protect capacitors against alternate harmonics
- **Construction:** 100% copper windings for cool operating temperatures; designed operating temperature rise less than 80°C. Open frame construction with 220°C insulation system
- **Thermal sensors:** One per phase, self-resetting thermistors provide reactor over-temperature protection and indication
- **Reactor indicating light:** Thermal overload indicating light activates when reactor temperature reaches 180°C
- **Warranty:** One-year replacement of reactors

Standards and Certifications

- UL and CSA listed

AUTOVAR 300 Automatic Power Factor Correction Capacitor Systems

Product Description

Automatically switched power factor correction systems for low voltage applications.

- Wallmount design is ideal for minimum space requirements
- Programmable to automatically add/subtract capacitor banks to maintain preset target power factor
- Heavy-duty, three-phase capacitor construction
- Five-year warranty of cells

Application Description

Service entrance power factor correction installations requiring precise maintenance of target power factor in a very small footprint.

Features

Configuration

- **Cabinet:** Wall mounting 12 gauge steel with ANSI 61 gray, NEMA 1 (gasketed)
- **Power line interconnect:** Rugged, power distribution block connection
- **Fusing:** 200,000 ampere interrupting capacity provided on all three phases of each bank. Blade-type fuses mounted on insulator stand-offs with blown-fuse indicating lights
- **Blown-fuse lights:** Blown-fuse indicating lights for each phase and stage located on the door
- **Door interlock:** Door interlock automatically disengages capacitors. Power continues to be provided to the unit until the disconnect is open
- **Exhaust fans:** Provide ventilation. Dust filtering included

Controller

- Digital display of power factor and number of energized banks
- Visual indication of insufficient kVAR to reach target power factor
- LCD backlight display
- Capacitors disabled in steps within 35 ms of main power interruption
- Harmonic measurement up to 19 harmonic and alarm (THDV)
- Automatic detection and correction of CT and phase polarity
- Automatic detection of connected steps
- Maximum 14 output steps
- Provides protection against overvoltage, overtemperature and harmonic overload events
- Advanced control features available
- Optional communications capability (C option controller)
- Standard metering capability
 - Voltage
 - Current (sensed phase only)
 - Frequency
 - Active power (kW)
 - Reactive power (kVAR)
 - Apparent power (kVA)

Contactor

- Fully rated for capacitor switching up to 60 kVAR at 600V
- Integral pre-charge/pre-insertion module standard. The contactor reduces damaging switching transients. This provides safety and durability for the system:
 - Lessens the chance of disrupting sensitive electronic equipment
 - Reduced inrush current extends the life of the capacitor cells

Additional Features

- Optional molded case circuit breaker rated 65 kAIC at 480V and 600V
- Personnel ground fault interruption provides protection in case of accidental contact with control power and ground
- NEMA 3R weatherproofing

Standards and Certifications

- UL/CSA listed and recognized

AUTOVAR 600 Automatic Power Factor Correction Capacitor Systems

Product Description

Programmable to automatically add/subtract capacitor banks to maintain preset target power factor.

Application Description

Service entrance power factor correction installations requiring precise maintenance of target power factor.

Features

- Heavy-duty, three-phase capacitor construction
- Five-year warranty of cells

Configuration

- **Cabinet:** 12 gauge steel with ANSI 61 gray, powder coat finish. Lift bolts standard, NEMA 1
- **Power line interconnect:** Rugged, copper bus bar connection with access provided for top or bottom entry. Bus bars are braced for 65 kAIC at 480V. All internal power wiring connections from bus are laid out on a most direct basis with minimum bends for ease of troubleshooting. Clear barrier limiting access to live parts included standard
- **Modular tray design:** Capacitor banks arranged in modular trays with capacitors, fuses, blown-fuse indicating lights, and contactors grouped in a logical, easily understood layout. This permits easy access, quick identification of operating problems and ease of expandability
- **Fusing:** UL recognized, 200,000 ampere interrupting capacity provided on all three phases of each bank. Blade-type fuses mounted on insulator stand-offs
- **Blown-fuse lights:** Blown-fuse indicating lights located on the door-mounted blown and at individual fuses to facilitate tracing of cleared fuses
- **Push-to-test:** Allows testing of door-mounted blown fuse indicating lights
- **AutoLocate:** When door is open and bus energized, fuse circuit automatically checks for cleared fuses. If a fuse has cleared, the light at the fuse comes on for easy troubleshooting
- **Door interlock:** Door interlock automatically turns off control circuit when engaged. Power continues to be provided to the unit until disconnect is open

- **Exhaust fans:** Two fans per cabinet provide thermal protection. Dust filtering provided
- **Ease of expansion:** Capacitor stage nests are self-contained and can be added in the field. Two bolts mount the nest in the field. Control wire plugs connect to factory standard wire harness on the left side of the cabinet
- **Ease of replacement:** Cells can be easily individually replaced by removing the mounting bolt and lifting out of the nest without removal of any other components

Controller

- Digital display of power factor and number of energized banks
- Visual indication of insufficient kVAR to reach target power factor
- LCD backlight display
- Capacitors disabled in steps within 35 ms of main power interruption
- Harmonic measurement up to 19 harmonic and alarm (THDV)
- Automatic detection and correction of CT and phase polarity
- Automatic detection of connected steps
- Maximum 14 output steps
- Provides protection against overvoltage, overtemperature and harmonic overload events
- Advanced control features available
- Optional communications capability (C option controller)
- Standard metering capability
 - Voltage
 - Current (sensed phase only)
 - Frequency
 - Active power (kW)
 - Reactive power (kVAR)
 - Apparent power (kVA)

Contactors

- Fully rated for capacitor switching up to 60 kVAR at 600V
- Integral pre-charge/pre-insertion module standard. The contactor reduces damaging switching transients. This provides safety and durability for the system:
 - Lessens the chance of disrupting sensitive electronic equipment
 - Reduced inrush current extends the life of the capacitor cells

Additional Features

- Optional molded case circuit breaker, rated 65 kAIC at 48V and 600V
- Personnel ground fault interruption provides protection in case of accidental contact with control power and ground
- Control wiring—standard NEC color-coded modular bundles with quick disconnect feature for ease of troubleshooting or ease of expendability
- Optional digital metering

AUTOVAR Filter—LV Automatic Harmonic Filter

Product Description

Automatically switched harmonic filter/ power factor corrections systems.

- Programmable to automatically add/subtract filter banks to maintain preset target power factor
- Filter steps tuned for maximum efficiency in reducing harmonic currents in three-phase environments with heavy nonlinear loads

Application Description

Service entrance power factor correction installations requiring precise maintenance of target power factor in three-phase, nonlinear, high harmonic environments.

Features

- Efficient modular design for short lead-times, ease of maintenance and ease of future expansion
- Heavy-duty, three-phase capacitor construction with reliable, threaded terminal connections
- Cool operating, 100% copper wound, thermal protected reactors are sized up to 150% of rated capacitor current

Configuration

- **Operation:** AUTOVAR harmonic filters are designed to be sized the same as any power factor correction unit. In most low voltage applications where harmonics are generated by nonlinear loads, no harmonic audit is necessary to design the AUTOVAR filter because it is already designed for typical harmonic spectrums at the kVAR size specified
- **Cabinet:** 12 gauge steel with ANSI 61 gray, powder coat finish. Lift bolts standard, NEMA 1

- **Power line interconnect:** Rugged, copper bus bar connection with access provided for top or bottom entry. Bus bars are braced for 65 kAIC at 480V. All internal power wiring connections from bus are laid out on a most direct basis with minimum bends for ease of troubleshooting. Clear barrier limiting access to live parts included standard
- **Modular tray design:** Capacitor banks arranged in modular trays with capacitors, fuses, blown-fuse indicating lights, and contactors grouped in a logical, easily understood layout. This permits easy access, quick identification of operating problems and ease of expandability
- **Fusing:** UL recognized, 200,000 ampere interrupting capacity provided on all three phases of each bank. Blade-type fuses mounted on insulator stand-offs
- **Blown-fuse lights:** Blown-fuse indicating lights located on the door-mounted blown and at individual fuses to facilitate tracing of cleared fuses
- **Push-to-test:** Allows testing of door-mounted blown fuse indicating lights.
- **AutoLocate:** When door is open and bus energized, fuse circuit automatically checks for cleared fuses. If a fuse has cleared, the light at the fuse comes on for easy troubleshooting
- **Door interlock:** Door interlock automatically turns off control circuit when engaged. Power continues to be provided to the unit until disconnect is open
- **Exhaust fans:** Two fans per cabinet provide thermal protection. Dust filtering provided
- **Ease of expansion:** Capacitor stage nests are self-contained and can be added in the field. Control wire plugs connect to factory standard wire harness on the left side of the cabinet
- **Ease of replacement:** Cells can be easily individually replaced by removing the mounting bolt and lifting out of the nest without removal of any other components

10.4

SPD, Power Conditioning, PF Capacitors and Harmonic Filters

Power Factor Correction Capacitors

Controller

- Digital display of power factor and number of energized banks
- Visual indication of insufficient kVAR to reach target power factor
- LCD backlight display
- Capacitors disabled in steps within 35 ms of main power interruption
- Harmonic measurement up to 19 harmonic and alarm (THDV)
- Automatic detection and correction of CT and phase polarity
- Automatic detection of connected steps
- Maximum 14 output steps
- Provides protection against overvoltage, overtemperature and harmonic overload events
- Advanced control features available
- Optional communications capability (C option controller)
- Standard metering capability
 - Voltage
 - Current (sensed phase only)
 - Frequency
 - Active power (kW)
 - Reactive power (kVAR)
 - Apparent power (kVA)

Contactors

- Fully rated for capacitor switching up to 60 kVAR at 600V
- Integral pre-charge/pre-insertion module standard. The contactor reduces damaging switching transients. This provides safety and durability for the system:
 - Lessens the chance of disrupting sensitive electronic equipment
 - Reduced inrush current extends the life of the capacitor cells

Reactors

- **Tuning:** Reactors tuned to the 4.7th harmonic order (nominal 5th). This provides maximum effectiveness in reducing harmonic currents in three-phase systems with harmonics caused by six-pulse devices
- **Detuning:** Reactor designs can be detuned upon request to 4.2nd to protect capacitors against alternate harmonics
- **Windings:** 100% copper windings for minimal temperature rise under load
- **Thermal overload protection:** Each reactor includes three normally closed, auto reset thermostats that open at 180°C. When thermostats engage, the contactor opens
- **Insulation:** 220°C insulation system
- **Warranty:** One-year replacement of reactors

Additional Features

- Optional molded case circuit breaker rated 65 kAIC at 480V and 600V
- Personnel ground fault interruption provides protection in case of accidental contact with control power and ground
- Control wiring—standard NEC color-coded modular bundles with quick disconnect feature for ease of troubleshooting or ease of expendability

Standards and Certifications

- UL/CSA listed and recognized

Options

Description	Option Code
Current transformer—multi-tap, split core current transformer ^⑤	TX2
Hands-off auto switch—provides manual control to connect or disconnect capacitor stages regardless of controller output	H
Remote alarm relay—relay for a remote alarm to indicate inability to reach target power factor	A
Molded case circuit breaker (65 kAIC at 480V)	M
Weatherproofing (NEMA 3R)	W
Communicating controller	C
IQ 250 solid-state meter ^⑥	Q

Notes

^① Enclosures for 550 and 600 kVAR at 480 and 600V will be one double-door section wide if circuit breakers are required (enclosure size KK). Enclosure for 250 kVAR at 480V will be one double-door section wide if a circuit breaker is required.

^② Other ratings available, please consult factory.

^③ L + L under enclosure size denotes two size L enclosures—one for the capacitors, one for the reactor case.

^④ For KK enclosure design, change the last digit of the catalog number to 1. For example, 500THFSR431.

^⑤ A current transformer with a 5 ampere secondary is required to operate an automatic capacitor bank. Rating based on service entrance ampacity. For other ratios, please consult factory.

^⑥ Not available with weatherproofing option.

For dimensional information, refer to **Page 62**.

Transient-Free Static Switching Power Factor Correction Units

Product Description

Transient-free statically switch capacitor units are available in two models.

The FTE model is a real-time transient-free system, used to compensate extremely rapid loads within one cycle of operation (typically 5–20 msec).

The FTA model is a fast transient-free system, used to compensate any loads within 3–4 seconds.

The FTA and FTE units employ a fast or real-time response, and include the ability to switch larger steps without creating significant line noise. These relatively maintenance-free units reside in a smaller footprint and are ideal for use in applications such as flicker control, large motor starting, bus voltage stabilization, fault ride through solutions, power factor correction and many more.

Application Description

- Motor starting
- On-site generation support
- Spot welding
- Wind turbines
- Other dynamic loads

Three current transformers with a 5 ampere secondary are required to operate this capacitor bank.

Rating based on Service Entrance Ampacity. For other ratios, please consult factory.

- Startup and Commissioning by factory trained personnel is required for proper operation and warranty of this system

Application Example—Spot Welding

Spot Welding (Auto Manufacturer)

10

Features, Benefits and Functions

- Transient-free capacitor group switching, using electronic switching elements
 - Simultaneous connection/disconnection of all required steps
 - Consistent capacitor values and stable filter characteristics
 - Harmonic filtration
 - Three independent control modes:
 - Power factor control
 - Voltage control
 - Load sharing with another compensation system connected to the same transformer
 - Unique SCAN feature reduces capacitor duty cycles
 - Remote control of compensation systems available via LAN or Ethernet
 - Integrated three-phase network analyzer:
 - Measures all power parameters on each phase (V, I, kW, kVAR, kVA)
 - Measures voltage and current harmonics to the 63rd harmonic
- FTE unit includes all of the above, plus:
- Reduces voltage flicker and voltage sag
 - Provides network reactive power support
 - Offers voltage control options

Standards and Certifications

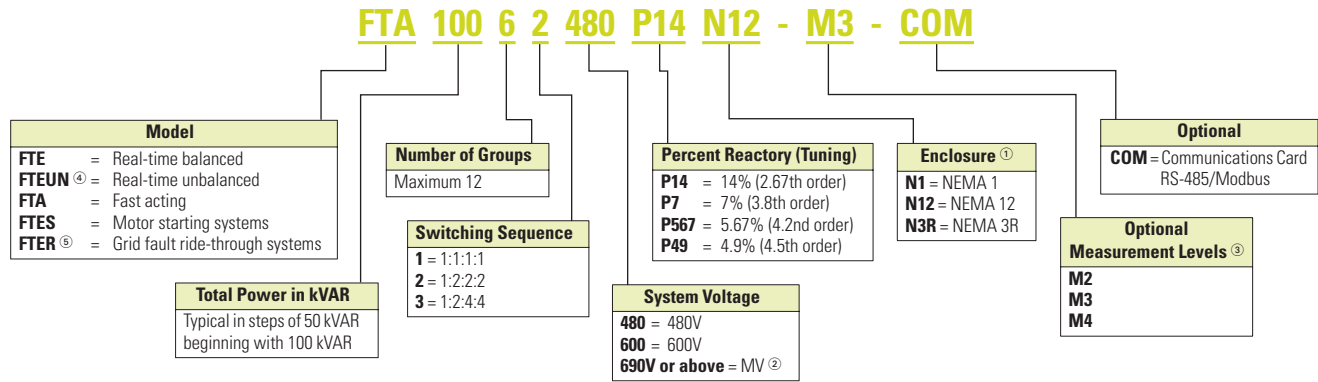

Enclosure

- EMC—EN50081-2, EN50082-2, EN55011, EN61000-4-2/3/4/5, ENV50204, ENV50141
- CE Mark—73/23/EEC am. 93/68, 98/37/EC art. 4(2)
- Safety—EN61010-1, EN60439-1, EN60204
- UL 508
- CSA

Catalog Number Selection

TFSS

Technical Data and Specifications

Product Configurations

Network voltage

- 210–690V
- Engineered solutions up to 15 kV

Frequency

- 45–55 Hz for 50 Hz network
- 55–65 Hz for 60 Hz network

Capacitor group configurations

- Up to 12 groups per one controller
- Switching sequence:
 - 1:1:1:1 (all equal)
 - 1:2:2:2 (half group)
 - 1:2:4:4 (quarter, half groups)

Acquisition time

- FTE—5–20 ms for a 50 Hz network
- FTE—4–16 ms for a 60 Hz network
- FTA—1–4 second maximum

Notes

- ① All models are CE approved. Please notify if UL or cUL is required.
- ② MV units require:
A correctly sized and specified step-up transformer
MV and LV interconnection, switching and protection
- ③ All systems are offered with Measurement Level 1 (f, I, V, kW, kVAR, kVA, PF) and no communications card. The measurement levels can be upgraded to Measurement Level 2 (adds THD I and THDV), Measurement Level 3 (adds waveforms, I and V harmonics) and Measurement Level 4 (adds event log).
- ④ Balanced system employs two-phase switching, unbalanced system employs individual three-phase switching.
- ⑤ For motor start and grid fault ride-through solutions, please consult factory.

Active-Harmonic Filter-Harmonic Correction Unit—NEMA 1 Enclosure

Product Description

Active Harmonic Filters (Harmonic Correction Units—HCUEs) provide dynamic harmonic correction by actively injecting equal and opposite currents into the customer’s electrical distribution system that cancel the entire spectrum of harmonic currents at the point of connection.

Application Description

Typical applications include locations with large amounts of nonlinear loads including 6- and 12-pulse PWM AC variable frequency drives, DC drives, as well as other switch-mode power supply equipment. This equipment can be found in water and wastewater treatment facilities, industrial manufacturing and warehousing plants, military bases, and commercial (HVAC) locations.

Features, Benefits and Functions

Unlike passive filters, by providing dynamic correction, HCUEs can provide effective harmonic correction for varying load conditions and harmonic spectrums up to their rated capacity. HCUEs also have the secondary benefit of providing power factor correction with any excess capacity after correcting all harmonic conditions.

- Fast action
- NEMA 1 and NEMA 12 enclosures available:
 - Wallmount (50 and 100 ampere designs)
 - Floor-standing (300 ampere design)
- Touchscreen HMI
- Modbus and Ethernet connectivity

Note: Requires at least 3% series input line reactor or equivalent 6% DC bus choke in each AC drive for optimum performance.

Advantages

- Can be sized to guarantee specific levels of harmonic correction, such as meeting IEEE 519 recommended levels
- Cannot be overloaded
- Can be expanded without affecting performance
- Broad spectrum of cancellation (2nd to 50th harmonic)
- Power factor improvement
- Easier and less expensive installation
- Comprehensive control

Standards and Certifications

- UL/CSA approved

10.4

SPD, Power Conditioning, PF Capacitors and Harmonic Filters

Power Factor Correction Capacitors

Technical Data and Specifications

- 20 kHz switching carrier frequency
- 208–480V $\pm 10\%$, 600V and 690V with autotransformer
- 50/60 Hz ± 3 Hz frequency
- Ambient temperature 0°C to +40°C enclosed
- Seismic Zone 4
- Output capacity—self limited to 100% current rated
- Corrective capability— $<5\%$ TDD and near unity displacement power factor
